

JOIN US IN CAPTURING CARBON DIOXIDE FROM THE ATMOSPHERE!

Carbon removal from our atmosphere is essential in addressing the world's climate crisis.

We are a proud **carbon capture education partner** with Tomorrow's Air and Climeworks. To date, we have supported the removal of one ton of carbon dioxide from the air which is now stored deep underground. All of our travelers are invited to support carbon capture when traveling with us.

How it works:

This is not a carbon offset program - this technology actively captures and removes CO₂ from the air. Tomorrow's Air is uniting travelers, companies and the destinations who serve them to support carbon removal with long-lived storage. Carbon removal means capturing CO₂ and locking it away in plants, soils, oceans, rocks, saline aquifers, depleted oil wells, or long-lived and useful products like cement. Air is drawn into a direct air capture machine with a fan, and adheres to a filter within the collector. Once the filter is saturated, the collector is closed, and the temperature is increased, releasing pure CO₂ which can then be mineralized, or used in other products.

How you can participate:

There are a number of monthly subscription options, some starting as low as \$10/month through www.tomorrowsair.com/act/clean-up. A portion of the funds are used toward education and awareness. You will not only contribute to the capture of CO₂ but will have access to travel benefits with other partners and at the end of each month, you will receive a confirmation of your carbon clean up.

Resources to learn more and become an advocate for carbon removal are bountiful. We suggest starting with the following websites:

tomorrowsair.com
climeworks.org
unwto.org

Thank You!
